Sample covariance
Ledoit-Wolf
MCD
Benchmark covariance
N = 62
N = 5,000
Interquartile range (30 seeds)
A. Covariance estimation error
Relative covariance error
Reference observations at floor (%)
B. Deviation-score error
Median relative error in D^2
Reference observations at floor (%)
C. Calibration against the benchmark, central tendency
Median $D^2 \div \chi^2_{11}$ median
IQR to 5.8 × 10^5
(N = 5,000)
Reference observations at floor (%)
D. Calibration against the benchmark, tail
Reference group beyond the .95 cutoff (%)
Reference observations at floor (%)
E. Rank deficiency (MCD)
MCD fits with singular covariance (%)
N = 62
N = 200
N = 1,000
N = 5,000
Reference observations at floor (%)
F. Asymmetry and contamination (N = 1,000)
Median relative error in D^2
